FCM Software Upgrade

Setup

- Download the appropriate upgrade file.
- Connect your computer to the first Ethernet port on the display unit (see Picture 1). Depending on your computer you might need a cross-over Ethernet cable, but usually this is not necessary. When you have plugged in both ends of the working network cable a green light is lit on the Ethernet port on the display.
- Set your computer to use the static IPv4 address 192.168.1.110.

Picture 1 Ethernet port

Upgrade

- Open a web browser and go to address <u>http://192.168.1.114</u>, you should now see the Web Interface.
- Select 'Upgrade Software' from the left, you should now see the same view as in Picture 2.
- Click on 'Browse...' and select the upgrade file that you have downloaded.
- Click on 'Upload to machine' to send the upgrade to the display.
- After the upload you should see a message about a successful upgrade.
- Now you can select 'Tools' from left and click on 'Restart' or cycle power to the display to start using the new software.
